

High Availability IP Video Server

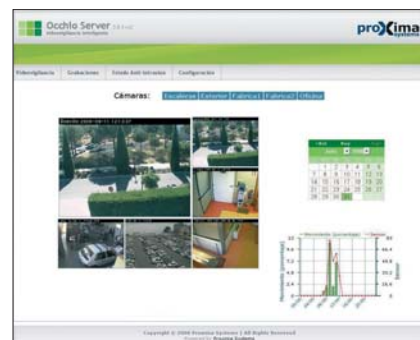

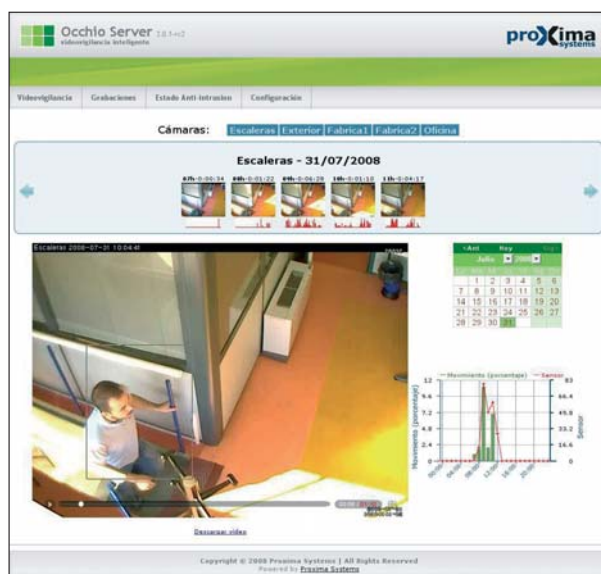

Occhio Server is the ideal digital video server for industrial environments and includes, among others, the following features: live video and access to recordings via PC or mobile phone, access control and video alerts of intrusion via MMS and e-mail.

Occhio Server allows access to video recordings via web, with instant playback. Thanks to the "daily summary" chart, you can see at a glance both the amount of movement in the monitored area and the number of activations of the intrusion detectors installed.

In the event of intrusion or other alarm, the system sends an MMS or e-mail containing a video sequence. This function is controlled through the use of a smart card with an associated reader.

The possibility of arranging the cameras in multiple locations, each with various areas, together with the customised views, allows the system to perfectly satisfy all surveillance requirements.

Specifications subject to change without notice

Functions:

- ✘ Unique web interface for access to live video and recordings.
- ✘ Dispatch of intrusion alerts by MMS or e-mail containing a video.
- ✘ Control of intrusion alerts dispatch by proximity card.
- ✘ Flexible display with customised views.
- ✘ Charts of activity in the areas watched.

Technical features:

- ✘ Versions for 25, 50 or 100 IP cameras.
- ✘ High availability and tolerance to failure.
- ✘ Organisation of users by different levels of access.
- ✘ Operation via any standard web browser.
- ✘ Video support in MPEG4, MJPEG and H.264 format.
