

Iprox Cloud

Data monitoring and control remote from any mobile device

Iprox Cloud is a web application that receives, stores, arranges and presents numerical data accompanied by graphics, in such a way that they are of the greatest possible help in the decision-making process for the machine or monitored process.

Safe access and visualization are undertaken through a web browser from a device with internet access

Moreover, it is also possible to control the machine or process remotely from an Iprox Cloud dashboard. The web interface allows the machine to be remotely turned on or off, its operating mode to be changed, etc.

All users with administrator access level can define as many dashboards as the need, so each user has the correct level of access to the information they need.

Moreover, if video cameras are incorporated, it is possible to watch live images and recording integrated in the dashboards.

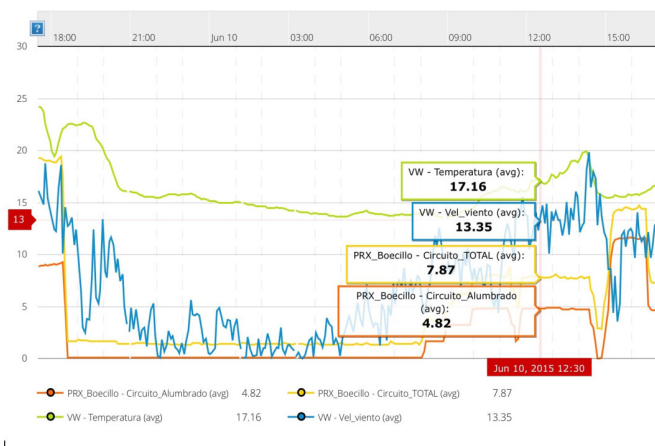

Features

Analysis of historic data in order to easily detect with the origin of the problems or inefficiencies

Reduction of intervention times

Improvement of the decision-making process

Personalised for each manufacturer or process

"If you cannot measure it, you cannot improve it"

Your data available all the time, everywhere,
we help you when you need it.

Advantages of Proxima Systems cloud services

Your data will be stored with maximum security in high availability servers housed in a first level provider. They are available 24 hours a day. The query can be made from any device with internet access.

We help you: Our engineers are available from 9 a.m. to 6 p.m. from Monday to Friday for any questions that may arise. Telephone support is included.

SIM Included: Our hardware includes the SIM card with data traffic without communication limit. You will not have to worry about hiring a fee and monitor consumption.

Configurable alarms. Control any event with our alarm system configurable and discover at the moment if something out of the ordinary is happening thanks to the notifications by SMS and Email.

Updates of software for the support of new devices and versions of browsers.

Remote control and programming of the machine /process.

Real-time visualization of all monitored variables. Reports and graphs of the recorded data.

Export of data and reports in CSV, PDF, JPEG format.

Open API for data exchange with services / applications of others manufacturers.
